

CS 2A Syllabus - Fall 2020

Introduction to Object Oriented Programming in C++

Hey there. My name is Anand. I will be your instructor for this course. Please read this syllabus carefully. You should especially read it if you have never taken a class from me before.

First things first

My teaching style: (1) Highly hands-off (2) Will NOT debug your code for you (3) Nobody else is allowed to debug your code either (4) You will largely help each other in class (5) I will simply be an active observer in the forums to make sure you don't say anything silly or bad and find out how much value you have contributed to OTHERS at the end of the quarter. (6) Very occasionally, I may comment in the forums to answer unanswered questions or correct wrong suggestions (7) Your participation scores are worth 15%, and they are SUBJECTIVELY determined by me and you can't find out how much you will get. (8) 1-1 Office hours are ONLY for discussing personal/confidential issues. (9) Asking a private question of general value to all students will get an answer along with compensatory negative points in my private spreadsheet.

Course Description

CS 2A is an introduction to object-oriented programming using the C++ language. Absolute beginners or students already familiar with other programming languages will learn how to write C++ programs that cover a wide range of applications. The ability to work with computers and access to the internet are the only prerequisites.

A working facility with simple algebra as well as good written English comprehension skills are both strong advisories.

Important note

By enrolling in this course in Fall 2020, you are implicitly agreeing that this syllabus provides a bare minimum of what you may experience during a one-quarter run of this class. However, experimental variations (e.g. zooming breakouts in place of physical lectures) may gradually be introduced on a per section basis. You agree to be part

of these too and to meet reasonable (as determined by me) additional flexible learning requirements that may be incorporated into this class before the finals (totals may be scaled appropriately if you're doing it for a grade).

What you're signing up for

Here is the way I approach teaching: I don't think I have ever been fond of stuffing knowledge down the throats of people who don't want it. So you shouldn't be in my CS **2B** class if you don't want CS at this time in your life. But how do you know if you want CS or not?

Well, you could try **this course - CS2A**. Chances are that it is your cup of tea and you want more of it, especially if you're curious, inquisitive and brilliant.

If you're just doing the quests for your own edification at your own pace - Awesome. That's the way to be. No fun being stressed-ful when you're questful.

Operational details

Canvas is our hub to coordinate some activities and take online exams. Most of the rest of our work will happen at other online locations, including youtube, zoom, quests, reddit, etc. You will start your adventure in Foothill's class by posting an introductory note (required) about yourself. You can simply reply to my own introductory post if you prefer.

Other than that, we will use publicly available resources with discretion, courtesy and efficiency to share information and help each other.

Don't say anything that you'll end up regretting. OTOH do try to let your natural genuine curiosity shine through. Maintain your profile on our subs as you would if you were a professional and it will free up a lot of your time.

I will try to remove posts that I deem (in my subjective opinion) to be a liability to your future self. But you can't rely on it. Best to be helpful, courteous, informative and only post useful tips, tricks and observations. They usually have more lasting value.

- Participating in the course discussion forums earns participation points (max 15).
- Not participating does not earn any points.
- Participating negatively by souring up someone else's experience earns negative participation points (no min).

Assessment

If you're doing this course for kicks, or other fun reasons, you can skip this section.

If this course is offered for a grade, and you are taking it for a grade, then, your final grade will be based on programming quests (scaled to 60%), participation (scaled to 15%) and exams (scaled to 20%) and the initial Data Representation quiz (5%). I will then use the absolute grading scale below:

For an	A+	A	A-	B+	B	B-	C+	C	D	F
You need (%)	97	91	88	86	80	78	75	67	60	< 60

The assessment has been designed to test both conceptual understanding and knowledge of practical issues. The quests emphasize the latter and the exams/quizzes emphasize the former. The idea is that you should be able to get a passing grade by doing well in the quests and moderately well in everything else, but in order to get into A-grade territory, you have to demonstrate a solid grasp of the concepts and good class citizenship¹. An A+ is possible if you truly enjoy programming, program in your spare time for fun, and take the trouble to independently look up, discuss (in the forums) and learn topics I will announce from time to time in announcements.

With that said, if you're focused solely on your grade and do everything flawlessly by the book, but fail to demonstrate good conceptual understanding, you will likely not get an A in this course.

In this course there will be:

- One data representation quiz in week 1 (worth 5%)
- 9 Mystery Quests you will solve at the average rate of about one per week (your own pace). These quests need to be solved using C++ (worth 60%)
- 1 midterm and 1 final exam (worth 20%)
- Online participation (worth 15%)

Mystery Quests

You will solve these at the public questing site (<https://quests.nonlinearmedia.org>). Discover the password for the first quest. There are clues in this syllabus.

Each quest will give you a certain number of trophies. You can check your total trophy count at any time by visiting your personal scoreboard at the [/q](#) site (It will be wiped on the 1st of Jan, Apr, Jul, and Oct).

The quests are set up such that the password to each quest is given out upon scoring a certain number of trophies in the preceding quest. However, I found that a few students were getting stuck in the lower numbered quests pounding away at them to eke out every remaining trophy before moving on, even though they had

¹ "How does good class citizenship contribute to learning?" you ask. Good question. I'm using it as a suitably weighted proxy for confidence in a person's conceptual knowledge. In the past, I noticed a good correlation between a person's understanding of a concept and their willingness to explain it to someone else.

already earned the password. This is a bad strategy. Keep moving when you get a password. You can always come back to polish your previous quests when you have free time before the freeze date.

At the end of the quarter, your total trophy count will be capped at 200 and scaled from 200 to 60%. You can win AT LEAST that many trophies if you make it through to the last one. If you spend a lot of effort getting up to high numbers by the time you get to Quest 7 already, then you'll be close to getting burned out right in time for two of the funnest quests of all. So plan your time and effort wisely. It's not like your old quests are going to disappear when you move on.

Exams

You will have one midterm exam on the Thu of Week 6 (Oct 29) and one final exam on the Thu of Week 12 (Dec 10). The midterm is worth 20 points and the final 40. Together, their combined score will be scaled from 60 to 20%.

These exams are objective style and will be administered via Canvas. You will typically have a window of time (18+ hours) during which you can begin these exams. But once you begin, the current version of Canvas does not allow you to *pause* your exam and come back to it. The 1h (or 2h for final) timer cannot be stopped once you start it, until you hit finish.

All exams are open-book and can be taken anywhere you get a decent Internet connection. I don't recommend taking it on mobile devices.

I'm not going to be able to prevent cheaters from cheating. But keep in mind that cheaters only cheat themselves. Copying is a waste of your time. Few good software companies employ programmers based upon their qualifications if their demonstrated competence doesn't measure up to their stated expertise.

Besides, you'll find that copying robs you of a great opportunity to really learn the language and having a load of fun.

Participation

This is worth a whopping 15%. To put it in perspective, imagine that you were taking this course for a grade.

If you do everything else flawlessly, except participating in the online class, then you can get a maximum of 85 points. It translates to a grade of B+.

To make it into A territory, you not only have to be good at what you do, but must be able to explain concepts to others in your own words. The participation score is a confidential number I keep in my own spreadsheet by continuously monitoring the discussion forums and estimating how helpful, informative and/or encouraging each participant is. If you don't show up here, you are not deemed a participant.

You can use a thumb rule and give yourself 1 participation point for every helpful post you make in our [sub](#). Add 1 more if the person for whom your post is meant follows up thanking you for a good tip. Subtract 1 for each unhelpful or mean post and a further 0.5 for each post that got deleted by a moderator. If you're over 16 (I mean participation points), you will likely try to avoid the first negative one - it will reset your total to 15. This means everybody who earns a reputation as a helpful dude gets exactly one freebie mild invective, which they'd be wise not to use.

Many students who complete my CS2B or CS2C successfully ask me to write college recommendations for them.² My job would be so much easier if you let your reddit posts speak for you and I just have to point your admissions officer at it.

Weekly Time Estimate

Programming, like all art, is not a 9-5 job. Sometimes you're on a roll and killing it. Other times, not so much.

I know how it is.

So there are no regular papers or labs due every day or week in this course. Rather, like real projects, there are deadlines you should strive to meet. You can plan your own time in your own way. Below is one suggestion:

Week	Date	Read References	Complete	Notes
0		Data Representation Quiz (on Canvas)	Quiz	
1		Vars, Exprs, Streams	Mystery Quest 1	
2		Control Structures	Mystery Quest 2	
3		Functions, Param passing	Mystery Quest 3	
4	Sun, 25 Oct	Arrays and Vectors	Mystery Quest 4	Quests 1-4 Freeze
5	Thu, 29 Oct	Review/Midterm (on Canvas)		
6		Objects, Classes	Mystery Quest 5	
7		Methods & Params	Mystery Quest 6	
8		Pointers, Mem Mgmt.	Mystery Quest 7	
9		Algorithms, Searching	Mystery Quest 8	
10	Sun, 6 Dec	Sorting	Mystery Quest 9	Quests 5-9 Freeze
11	Thu, 10 Dec	Final Exam (on Canvas)		

Every week, give yourself one or more topics to study and one or more programming quests to complete. If you have some programming experience already, expect to spend about 8-12 hours per week reading and/or attending lectures or watching videos. Budget an additional 10-15 hours for working on programming quests. To be on the safe side, budget about 25 hours per week (initially) for this course.

Preparatory Tasks

You must complete the first required task for this course no later than the first day of the quarter. This is just a simple 3-question quiz that **does not require prior knowledge of C++**. If you don't complete this task, you will be dropped and your seat likely given to a student on the waitlist. Consider this the equivalent of showing up to the first lecture. Not doing it will be treated as a no-show to the first lecture.

Also, if you think you may be dropping this course, I urge you to drop ASAP so I can give your seat to someone else on the waiting list.

² Please don't ask me to write you a college recommendation if you have only completed an A level course with me. The most I'd be able to say is something like "XYZ was in my class during ... They got a grade of ..."

Learning Resources

Rather than prescribe any particular resource,

- I'll give you a list of topics we'll cover each week.
- I'll suggest two *entirely optional* resources for you to learn about these topics. In the Canvas discussion forums, you can feel free to ask where to find certain topics. You can even share your own pointers to illuminating posts, articles, websites or videos with your classmates.

None of the suggested resources is a required purchase. The first resource is a set of Canvas Modules that ex-prof Michael Loceff created when he taught this course. Thanks to Michael, I'm able to make his entire set of modules available for reference absolutely free.

Many of you who are used to his style of teaching and his labs may recognize the spirit in them living on in our quests.

You can find Michael's materials when you scroll towards the bottom of the list of modules in Canvas. Much of it is still relevant enough to link into this course. This should be your first point of reference for most topics. But be aware of salient differences between the content of his modules and what some of our quests require. This shouldn't be a problem if you understand the concepts. But it will be a problem if you don't.

As always, hit our [sub](#), when in doubt.

Actually, that's not quite right.

When in doubt, try it out.

If you still just don't get it. Then hit our [subreddit](#).

My second resource suggestion is the book: *Absolute C++* (any edition at least as recent as the 2nd), by Walter Savitch, Addison Wesley.

Another recommended reference that may help with style issues is *The Elements of C++ Style*, Misfeldt, et. al., Cambridge University Press.

You can order these through our bookstore at <http://books.foothill.edu/>, phone: (650) 949-7305.

Other Resources

Professor Elaine Haight maintained [a blog called Opportunities for CS students](#). It contains announcements of internships, scholarships, free software offers, pertinent public lectures, etc. The CS Department continues to keep it current. Bookmark it and visit it frequently.

Lane's Lane

The Foothill STEM Center already provides fantastic assistance by making experienced CS tutors available for 1-1 real-time (synchronous) assistance almost 24/7 (via zoom) and generous hours in the STEM Center when the campus is open. Within the STEM Center, Lane Johnson hosts two special workshops each week focused especially on helping questers. Look for their actual hours on our [sub](#), or simply check into the STEM Center sometime and ask for Lane.

Canvas

This quarter, we will be using Canvas ONLY for the following:

- Reading announcements, reference material (modules) and the syllabus
- Introducing yourself with your reddit handle³ (your only required post in Canvas)
- Taking quizzes and exams
- Reviewing quest/test scores when they are ready (will be announced)
- Getting the password for your first quest (Starting Fall 2020, you will have to discover it yourself)
- Accessing virtual learning resources such as the STEM center, online tutorial rooms, etc.

Make sure your Canvas configuration settings are such that you get notified when there is a new announcement.

I am not using the Discussion Forums feature of Canvas.

Discussion Forums

This quarter, we'll continue to use our [subreddit](#) for all quest related discussions. Please note the following important information:

1. DO NOT SHARE personally identifying information of any kind. However,
2. Your avatar name should start with your first name and an underscore, followed by your initial (or full last name) + some digits
3. No matter what your avatar's name, you must sign your posts with your first name (I strongly discourage unsigned posts. A reply should be able to start with "Hi <Your_Name>")
4. You should never post your student ID (CWID) online. A lot of personal information about you can be unlocked by someone who has it.
5. If you have something negative to say about someone's post in the forums, you should direct your concern to me, not to the person in the forum.
6. KEEP IN MIND that these discussion posts will persist into the next quarter and later for future students. So everything helpful you say will help far more students than just your current classmates.
7. Use Canvas for anything not quest-related (enrollment, exams, modules, etc.)

Keep this in mind: ANY user anywhere in the world can quest and post/discuss in our subreddits. So you may see posts and replies by users with anonymous names like *coding_lion*, *bat_girl* and such. All posts are subject to

³ Your handle must start with your first name, an underscore and your last initial (or full name). Otherwise, your participation doesn't count towards your grade.

the same rules like *Johnny be good*, but only the ones with avatar names matching the spec in this syllabus will get participation credit.

Getting started on your Mystery Quests

Discover the password to the first quest, or ask someone nicely.

Passwords for subsequent quests will be automatically revealed upon *satisfactory progress* (as the machine sees it) in each preceding quest.

In order for rewards from a quest to count towards your total, you must have completed all previous quests. If you leave a hole in your trail of completed quests, then your total reward earnings is the sum of all rewards you earned before the first incomplete quest.

Bugs in your code?

Getting your code debugged by someone else is NOT allowed. That includes me, tutors, teachers, friends and relatives. Debugging your own code is an essential skill that aspiring programmers must learn and enjoy - Yes, enjoy!

Of course, I can't police this. But your enrollment in this class signifies acceptance of this condition (in addition to being bound by [Foothill's Academic Integrity Policy](#)). You cannot send your code to me, a tutor, a friend or relative and ask them what the issue is. What you can do is:

1. Check our [subreddit](#) to see if others have had similar issues
2. Explain (in our [subreddit](#)) what you're trying to do
3. Describe in English the detailed steps you would need to undertake (pseudocode)
4. Describe the behavior of your program and ask why it diverges from (2) if it does

Sometimes, a tutor, a fellow student or I may get curious about your code and want to see it. Under these exceptional circumstances, you can share your code on request.

Sometimes it is also ok to post your code on our [subreddit](#). Mostly, exercise good judgment regarding what can be shared. You want a fun and fulfilling learning experience. The best way to get it is to keep it fun and fulfilling for everyone. You wouldn't give away a movie's ending to a friend who's going to watch it. Why give them the solution to a problem when they can feel good finding it themselves?

Extensions

Extensions don't make sense because the quests are self-paced. You just have to complete each by their "freeze" dates to get credit. After their freeze dates, you can still complete them, but not for credit. There's a LOT of time to complete these quests even if you have to take some breaks. So, please don't ask for extensions.

Programming style

My personal preference for program formatting is the **C++** equivalent of the classic K&R style for C. It's not imperative that you follow the K&R style. I'm ok with any consistent and clean styling/formatting of your programs.

Compilers

Use an IDE/compiler of your choice. But you'll find better support from me and the STEM center if you stick to one of the environments we know about (ask).

Communication

Please use our [sub](#) for any question or comment that relates to the quests (except questions of a private nature). If you have a confidential question (grades or registration) you can email me. If you have a question that only makes sense of material you can find in Canvas (e.g. modules, syllabus, exams, etc.) then it makes sense to post that question in Canvas rather than our [sub](#).

Try to meet with each other after class (even if virtually), set up private study and programming groups and work on independent (non assignment) programming challenges outside of class. I'll give you a few interesting challenges from time to time. Some of these may earn you extra credit.

I'm generally online and able to chat in real time M-Th 10am to 11am.⁴ At other times, you can reach me via messaging in Canvas, Reddit or by [email](#). While on campus, my room number is `0x113d` (in hex). In week 1, you will learn how to decode that into decimal.

One-on-one meetings are only for discussing confidential stuff. If you privately ask me for an answer that is bound to be generally useful, you will get your answer, but also some secret negative points in my spreadsheet to even out the playing field for the others.

STEM Center

As the quarter progresses, I'll post Foothill-specific information on Canvas regarding any special access to the STEM Center or tutoring services arranged by the division.

Course outline and SLOs

You can access [the official course outline of record for all CS courses here](#). Student Learning Outcomes for this course are:

1. A successful student will be able to write and debug C++ programs which make use of the fundamental control structures and method-building techniques common to all programming languages. Specifically,

⁴ Times are in decimal, not binary. I kid you not, but someone did stop by my office at 2am once.

the student will use data types, input, output, iterative, conditional, and functional components of the language in his or her programs.

2. A successful student will be able to use object-oriented programming techniques to design and implement a clear, well-structured C++ program. Specifically, the student will use and design classes and objects in his or her programs.

Disability Resource Center

Foothill College is committed to providing equitable access to learning opportunities for all students. Disability Resource Center (DRC) is the campus office that collaborates with students who have disabilities to provide and/or arrange reasonable accommodations.

If you have, or think you have, a disability in any area such as mental health, attention, learning, chronic health, sensory, or physical, please contact DRC to arrange a confidential discussion regarding equitable access and reasonable accommodations.

If you are registered with DRC and have a disability accommodation letter of accommodations set by a DRC counselor for this quarter, please use Clockwork to send your accommodation letter to your instructor and contact your instructor early in the quarter to review how the accommodations will be applied in the course.

Students who need accommodated test proctoring must contact the DRC immediately if they cannot find or utilize your MyPortal Clockwork Portal. DRC strives to provide accommodations in a reasonable and timely manner. Some accommodations may take additional time to arrange. We encourage you to work with DRC and your faculty as early in the quarter as possible so that we may ensure that your learning experience is accessible and successful.

To obtain disability-related accommodations, students must contact Disability Resource Center (DRC) as early as possible in the quarter. To contact DRC, you may:

Visit DRC in Building 5400, Student Resource Center (physical visits suspended during college closure).

- On the web: <http://www.foothill.edu/drc/>
- Email DRC at drc@foothill.edu
- Call DRC at 650-949-7017 to make an appointment

Important Dates

For a list of important dates for the winter quarter, see [the official college page here](#).

Happy Hacking!

&
